Professional Summary

Software Engineer focused on designing and shipping production software across AI applications, document processing, workflow automation, native macOS development, and full-stack web platforms. Experienced building products from architecture through deployment using Python, Swift, FastAPI, Next.js, React, TypeScript, and modern API integrations.

Technical Skills

Languages: Python, Swift, TypeScript, JavaScript, HTML, CSS

Frameworks: FastAPI, Next.js, React, SwiftUI

Backend: REST APIs, Background Job Processing, Authentication, Webhooks, JSON Processing

AI & Automation: AI Applications, Document Processing, RAG Workflows, Workflow Automation

Platforms: macOS Development, Xcode, Git, GitHub, Vercel, Cloudflare, Stripe, Twilio

Professional Experience & Projects

RelayWorks — Founder & Software Engineer (2026–Present)

- Founded RelayWorks to build AI-powered software, developer tools, and commercial web applications.
- Designed and shipped a self-hosted AI document processing platform that converts PDFs and Office documents into structured Markdown, HTML, JSON, plain text, extracted images, and processing reports for AI and automation workflows.
- Built a production-ready FastAPI backend and Next.js frontend with asynchronous background processing, documentation, and deployment workflow.

Security Workflow IDE for macOS

- Designed and developed a native macOS IDE using Swift, SwiftUI, and Xcode.
- Built a multi-pane interface featuring an integrated code editor, interactive terminal, plugin toolbox, workflow dashboard, and project management.
- Implemented a plugin architecture and execution engine capable of running Python, Swift, and shell scripts with runtime arguments and execution metrics.
- Added persistent project/session storage and automated Markdown report generation.

CallbackCloser

- Engineered a customer engagement platform that automates missed-call recovery using Twilio messaging, authentication, Stripe billing, and appointment booking workflows.

Webhook Dashboard

- Built a dashboard for monitoring webhook events, diagnostics, alerts, and API activity.

AI Content Automation

- Developed AI-powered workflow automation integrated with Google Workspace.

Engineering Highlights

- Designed and shipped multiple software products spanning AI, SaaS, desktop, and web platforms.
- Built applications using Python, Swift, FastAPI, Next.js, React, and TypeScript.
- Created commercial documentation, product websites, and developer tooling.
